~~Transitional care unit provides skilled nursing care and therapy services to residents who need additional care after their hospital stay.~~

Hiroaki Kobayashi has trained 1500 mariners in ship handling over twenty years and he has systematized the methods of safe navigation into nine elemental techniques. Taking a rigorous and scientific look at good practice and attitudes, good seamanship can be viewed as a series of concrete technical functions, which can be in terms of competencies. By giving proper attention to human factors the conditions for maintaining system safety can be defined, and the interaction of human competencies and environmental conditions and their effects on system safety can be recognised. System safety in turn depends on good bridge team management, with particular emphasis on communication, cooperation and leadership – communication for the exchange of information, cooperation to smooth team activities, and leadership to ensure that each member of the team performs successfully.

Your vessel may be equipped with the most advanced technology and the most powerful engines, but the failure to apply the basic principles of bridge resource management can still prevent you from getting where you are going. Satellite systems, ARPA, electronic charts, AIS, sophisticated communication equipment and integrated navigational systems—all

these advanced technologies provide valuable capabilities. But accidents still happen, and they usually involve human error. This simple fact has made Bridge Resource Management (BRM) training a requirement for watchkeepers worldwide. Bridge Resource Management for Small Ships: The Watchkeeper's Manual for Limited-Tonnage Vessels is the first book to address the unique needs of operators of small ships (limited-tonnage vessels) including tugs, ferries, yachts, and other passenger-carrying vessels. Features: Case histories to illustrate important points A complete course in BRM, suited for studying on your own as well as a complement to your classwork Topics include: Introduction to BRM, Standard Operating Procedures, Passage Planning, Implementing the Passage Plan, Building a Passage Plan, Situational Awareness and Human Factors, including: Overreliance, Distraction, Stress, Fatigue, Complacency, and Transition; and Human Interactions, including Communications, Teams and Teamwork, Decision Making and Leadership, and Human Error

Hiroaki Kobayashi has trained 1500 mariners in ship handling over twenty years and he has systematized the methods of safe navigation into nine elemental techniques. Taking a rigorous and scientific look at good practice and attitudes, good seamanship can be viewed as a series of concrete technical functions, which can be in terms of competencies. By giving proper attention to human factors the conditions for maintaining system safety can be defined, and the interaction of human competencies and environmental conditions and their effects on system safety can be recognised. System safety in turn depends on good bridge team management, with particular emphasis on communication, cooperation and leadership – communication for the exchange of information, cooperation to smooth team activities, and leadership to ensure that each member of the team performs successfully.

This publication on Bridge Resource Management - Teamwork and Leadership (BRM-TL) covers the non-technical skill requirements of a bridge-team as specified in the IMO's STCW Tables A-II/1 and A-II/2 for both operational and management levels (including 2010 Manila Amendments). The book is meant to support a simulator-based course covering these requirements. On completion of the BRM-TL course, as detailed in this book, participants are expected to gain enhanced knowledge in the areas of effective management and optimum utilisation of all resources, required for the safe and successful conduct of a ship's voyage. BRM-TL course emphasises the non-technical skills of the bridge-team, which include managing human factors, effective communications, processes of team-building and leadership. To manage bridge processes, the book provides guidance on situational awareness, including team situational awareness, decision-making, contingency planning, as well as task management covering fatigue and workload planning. Additionally, this book introduces the concept of behavioural markers for assessing these soft skills to establish performance levels during a simulated exercise. Examples of behavioural markers applicable in a full-mission simulator-based exercise are also included.

On 13th January 2012 the cruise ship Costa Concordia hit the rocks off the Island of Giglio. Within just a few hours the ship lay to rest on the seabed in a semi-submerged state. The accident cost the lives of 32 people and has left a legacy in its wake that may change the course of an entire industry. How could such a modern ship complying with all main regulations be compromised by a series of "normal" human errors? What can be learned from the events of that night? The answers will lead to a new concept of Bridge Resource Management able to reform navigation in the digital age.

This user guide has been developed to consolidate existing IMO maritime security-related material into a companion guide to SOLAS chapter XI-2 and the ISPS Code so as to assist States in promoting maritime security through development of the requisite legal framework, associated administrative practices, procedures and the necessary material, technical and human resources. The intention is to assist SOLAS Contracting Governments in the implementation, verification, compliance with, and enforcement of, the provisions of SOLAS chapter XI-2 and the ISPS Code.

When software development teams move to agile methods, experienced project managers often struggle—doubtful about the new approach and uncertain about their new roles and responsibilities. In this book, two long-time certified Project Management Professionals (PMPs) and Scrum trainers have built a bridge to this dynamic new paradigm. They show experienced project managers how to successfully transition to agile by refocusing on facilitation and collaboration, not “command and control.” The authors begin by explaining how agile works: how it differs from traditional “plan-driven” methodologies, the benefits it promises, and the real-world results it delivers. Next, they systematically map the Project Management Institute’s classic, methodology-independent techniques and terminology to agile practices. They cover both process and project lifecycles and carefully address vital issues ranging from scope and time to cost management and stakeholder communication. Finally, drawing on their own extensive personal experience, they put a human face on your personal transition to agile—covering the emotional challenges, personal values, and key leadership traits you’ll need to succeed. Coverage includes Relating the PMBOKR Guide ideals to agile practices: similarities, overlaps, and differences Understanding the role and value of agile techniques such as iteration/release planning and retrospectives Using agile techniques to systematically and continually reduce risk Implementing quality assurance (QA) where it belongs: in analysis, design, defect prevention, and continuous improvement Learning to trust your teams and listen for their discoveries Procuring, purchasing, and contracting for software in agile, collaborative environments Avoiding the common mistakes software teams make in transitioning to agile Coordinating with project management offices and non-agile teams “Selling” agile within your teams and throughout your organization For every project manager who wants to become more agile. Part I An Agile Overview 7 Chapter 1 What is "Agile"? 9 Chapter 2 Mapping from the PMBOKR Guide to Agile 25 Chapter 3 The Agile Project Lifecycle in Detail 37 Part II The Bridge: Relating PMBOKR Guide Practices to Agile Practices 49 Chapter 4 Integration Management 51 Chapter 5 Scope Management 67 Chapter 6 Time Management 83 Chapter 7 Cost Management 111 Chapter 8 Quality Management 129 Chapter 9 Human Resources Management 143 Chapter 10 Communications Management 159 Chapter 11 Risk Management 177 Chapter 12 Procurement Management 197 Part III Crossing the Bridge
