The order of the differential equation is the order of the highest order derivative present in the equation. Here some of the examples for different orders of the differential equation are given. $dy/dx = 3x + 2$, The order of the equation is 1 $(d^2 y/dx^2) + 2(dy/dx) + y = 0$. The order is 2 $(dy/dt) + y = kt$. The order is 1; First Order Differential Equation
