A measure is a  
formula that is created  
specifically for use in  
a PivotTable (or  
PivotChart) that uses  
Power Pivot data.

# Where To Download Dax

Measures can be based on standard aggregation functions, such as COUNT or SUM, or you can define your own formula by using DAX. A measure is used in the Values area of a PivotTable.

## **Data Analysis Expressions (DAX) in Power Pivot -**

# Where To Download Dax

## **Excel** Formulas For

Power Pivot provides Data Analysis Expressions (DAX) for creating custom calculations in Power Pivot tables and in Excel PivotTables. DAX includes some of the functions that are used in Excel formulas, and additional functions that are designed to

# Where To Download Dax

work with relational data and perform dynamic aggregation. Here are some basic formulas that could be used in a calculated column:

bar more or less as you build an Excel formula in a cell of one of its worksheets.

To use a DAX function in the expression, click the Insert Function button on the PowerPivot Formula bar and select the function to use in the Insert Function dialog box (which is very similar

## Where To Download Dax

to the standard Excel Insert Function dialog box except that it contains only DAX functions).

## Revolution **How to Use DAX in Excel's PowerPivot Add-In - dummies**

A measure is a formula for the values area of Power Pivot table. A measure can be implicit or explicit.

## Where To Download Dax

Implicit measures are created automatically when you drag and drop a field in to

Power Pivot values area. For example, in last week's

introduction, we created an implicit measure for SUM of Sales by dragging and dropping the sales amount field in to values area of our
