In *Debating the Sacraments*, Amy Nelson Burnett brings together the foundational disputes regarding the baptism and the Lord's Supper that laid the groundwork for the development of two Protestant traditions—Lutheran and Reformed—as well as of dissenting Anabaptist movements. Burnett places these disputes in the context of early print culture, tracing their development in a range of publications and their impact on the wider public. Burnett examines not only the writings of the major reformers, but also the reception of their ideas in the pamphlets of lesser known figures, as well as the role of translators, editors, and printers in exacerbating the conflict among both literate and illiterate audiences. Following the chronological unfolding of the debates, Burnett observes how specific arguments were formed in the crucible of written critique and pierces several myths that have governed our understanding of the sacramental controversies. She traces the influence of Erasmus on Luther's followers outside of

Wittenberg and highlights the critical question of authority, particularly in interpreting the Bible. Erasmus and Luther disagreed not only about the relationship between the material world and spiritual reality but also on biblical hermeneutics and scriptural exegesis. Their disagreements underlay the public debates over baptism and the Lord's Supper that broke out in 1525 and divided the evangelical movement. Erasmus's position would be reflected not only in the views of Ulrich Zwingli and others who shared his orientation toward the sacraments but also in the developing theologies of the Anabaptist movement of the 1520s. The neglected period of 1525-1529 emerges as a crucial phase of the early Reformation, when evangelical theologies were still developing, and which paved the way for the codification of theological differences in church ordinances, catechisms, and confessions of subsequent decades.

For two reasons, we are particularly proud to include Wolfgang Brezinka's *Philosophy of Educational Knowledge* in this series of books on *Philosophy of Education*. The first is the philosophical interest of the work itself—its remarkable scholarship and the importance of the philosophical positions will be obvious to all readers. The second is that it brings to the English-speaking world a wonderful example of educational philosophy as now being practiced in the German-speaking world. All

too often philosophers in the Anglo-American tradition have not seen the sort of perspective on educational thinking that infuses this work. And since this book has been widely read in its original version, it has had a considerable impact upon philosophy of educational research and science in the German-speaking countries. An understanding of this may help in the development of even more cooperative relations among students of education in all countries. C. 1. B. Macmillan D. C. Phillips

PREFACE TO THE ENGLISH EDITION 'I am not unmindful how little can be done... in a mere treatise on Logic, or how vague and unsatisfactory all precepts of Method must necessarily appear, when not practically exemplified in the establishment of a body of doctrine. Doubtless, the most effectual mode of showing how the sciences... maybe constructed, would be to construct them". JOHN STUART MILL (1843)

1 Parents have a duty to educate their children, teachers to educate their pupils. For this reason there is widespread interest in education. Knowledge of education has long been offered under names like "pedagogics", "pedagogy" or "educational theory". Originally this meant practical knowledge based on common sense. Since the Enlightenment, however, attempts have been made to acquire scientific knowledge of education.
