This book highlights the impacts of emerging pollutants (both organic and inorganic) in water bodies and the role and performances of different water and wastewater treatment approaches that are presently being employed in the field of environmental engineering. Some of these approaches are focused on 'end-of-pipe' treatment, while most of these approaches are focused on the application of novel physico-chemical and biological techniques for wastewater treatment and reuse. The goal of this book is to present the emerging technologies and trends in the field of water and wastewater treatment. The papers in this book provide clear proof that environmentally friendly (bio)technologies are becoming more and more important and playing a critical role in removing a wide variety of organic and inorganic pollutants from water. In Focus - a book series that showcases the

latest accomplishments in water research. Each book focuses on a specialist area with papers from top experts in the field. It aims to be a vehicle for in-depth understanding and inspire further conversations in the sector.

Key features: Contains the contributions of international experts from the UK, USA, Australia, Spain and Taiwan Includes over 1,500 high-quality illustrations Maintaining the health of pigs is vital in pig farming and production. This new book written by experts from around the world focuses on the health of pigs, first with coverage of the disorders of pigs organised by clinical sign and body system. The book explores environmental medicine and then health maintenance. Treatment options are discussed, emphasizing a reduction in antimicrobial use and an increased awareness of a holistic approach to treatment. The book includes over 1,500 high-quality illustrations to enhance the clinical description, as well as a wealth of high-quality videos to test the reader in making differential diagnoses with treatment options. Quizzes at the end of each section also encourage reflective learning. Clinical examination of the individual pig and groups are covered along with environmental medicine, making this the ideal reference for veterinary practitioners and students. Those interested in population medicine (poultry, aquaculture, cattle and small ruminant and apiaries) will particularly enjoy the holistic approach to veterinary medicine. All those who appreciate the many talents of pigs will enjoy the practical approach to managing the health of their animals. This book moves veterinary science forward, promoting health rather than treating disease. It will be your number one reference for keeping your pigs healthy.

This volume documents the contributions presented at the Seventh Scientific Meeting of the Spanish Astronomical Society (Sociedad Española de Astronomía, SEA). The event brought together 301 participants who presented 161 contributed talks and 120 posters, the greatest numbers up to now. The fact that most exciting items of the current astronomical research were addressed in the meeting proves the good health of the SEA, a consolidated organization founded fifteen years ago in Barcelona. Two plenary sessions of the meeting were devoted to the approved entrance of Spain as a full member of the European Southern Observatory (ESO) and to the imminent first light of the greatest telescope in the world, the GTC (Gran Telescopio de Canarias), milestones that will certainly lead the Spanish Astronomy in the next future.

Grid-Scale Energy Storage Systems and Applications provides a timely introduction to state-of-the-art technologies and important demonstration projects in this rapidly developing field. Written with a view to real-world applications, the authors describe storage technologies and then cover operation and control, system integration

and battery management, and other topics important in the design of these storage systems. The rapidly-developing area of electrochemical energy storage technology and its implementation in the power grid is covered in particular detail. Examples of Chinese pilot projects in new energy grids and micro grids are also included. Drawing on significant Chinese results in this area, but also including data from abroad, this will be a valuable reference on the development of grid-scale energy storage for engineers and scientists in power and energy transmission and researchers in academia. Addresses not only the available energy storage technologies, but also topics significant for storage system designers, such as technology management, operation and control, system integration and economic assessment. Draws on the wealth of Chinese research into energy storage and describes important Chinese energy storage demonstration projects. Provides practical examples of the application of energy storage technologies that can be used by engineers as references when designing new systems.

Biological Oxidants: Generation and Injurious Consequences is a collection of papers that describes research work done concerning molecules of the intracellular and plasma membrane generating system in leukocytes; the intracellular interactions in oxidant-induced cellular injury; malignant transformation; and intracellular mechanism of oxidant formation. One paper reviews biological oxidants and the molecular basis of chronic granulomatous disease, particularly on compositions found within the plasma membrane. One such composition concerns the discovery of a flavocytochrome b as the central electron-transporting molecule in this system. Another paper examines the early injury of cells caused by external oxidants and the consequences of DNA damage. Other papers review the metabolism of vascular endothelial-derived reactive species, the calcium-modulated cellular effects of oxidants, as well as, the mechanism of inflammatory oxidant damage in tissues. This book is suitable for biochemists, microbiologists, and academicians whose works involve research of cell membranes.

'There was a time when I felt that I had grasped Lacan's essential being from within - that I had gained, as it were, an apperception of his relation to the world, a mysterious access to that intimate place from which sprang his relation to people and things, and even to himself. It was as if I had slipped within him.' In this short book, Catherine Millot offers a richly evocative reflection on her life as analysand and lover of the greatest psychoanalyst since Freud. Dwelling on their time together in Paris and in Lacan's country house in Guitrancourt, as well as describing their many travels, Millot provides unparalleled insights into Lacan's character as well as his encounters with other major European thinkers of the time. She also sheds new light on key themes, including Lacan's obsession with the Borromean knot and gradual descent into silence, all enlivened by her unique perspective. This beautifully written memoir, awarded the André
