Ad hoc networks refer to the wireless networking paradigm that covers a variety of network forms for specific purposes, such as mobile ad hoc networks, sensor networks, vehicular networks, underwater networks, underground networks, personal area networks, and home networks. The various forms of ad hoc networks promise a broad scope of applications in civilian,

commercial, and military areas, which have led to significant new research problems and challenges, and have attracted great efforts from academia, industry, and government. This unique networking paradigm necessitates re-examination of many established wireless networking concepts and protocols, and calls for developing new fundamental understanding of problems such as interference, mobility, connectivity, capacity, and security, among others. While it is essential to advance theoretical research on fundamentals and practical research on efficient algorithms and protocols, it is also critical to develop useful applications, experimental prototypes, and real-world deployments to achieve a practical impact on our society for the success of this networking paradigm. The annual International Conference on Ad Hoc Networks (AdHocNets) is a new event that

aims at providing a forum to bring together researchers from academia as well as practitioners from industry and government to meet and exchange ideas and recent research work on all aspects of ad hoc networks. As the first edition of this event, AdHocNets 2009 was successfully held in Niagara Falls, Ontario, Canada, during September 22–25, 2009.

Written by a hazardous materials consultant with over 40 years of experience in emergency services, the five-volume *Hazmatology: The Science of Hazardous Materials* suggests a new approach dealing with the most common aspects of hazardous materials, containers, and the affected environment. It focuses on innovations in decontamination,

monitoring instruments, and personal protective equipment in a scientific way, utilizing common sense, and takes a risk-benefit approach to hazardous material response. This set provides the reader with a hazardous materials "Tool Box" and a guide for learning which tools to use under what circumstances. Volume Five, Hazmat Team Spotlight, covers hazardous materials teams across the United States. Levels of response vary between urban and rural areas, as do resources. This volume covers the history, vehicles, types of response, equipment, and resources, as well as procedures and innovations across different teams nationwide. FEATURES Presents geographical and historical background of departments and hazmat teams Includes department organization and resources Provides an exploration of selected, specific department case studies nationwide Outlines basic operation

In James Patterson's new stand-alone thriller, one secret can bring down a government when the President's affair to remember becomes a nightmare he wishes he could forget. Sally Grissom is a top secret service agent in charge of the Presidential Protection team. She knows that something is amiss when she is summoned to a private meeting with the President and his Chief of Staff without any witnesses. But she couldn't have predicted that she'd be forced to take on an investigation surrounding the mysterious disappearance of the First Lady--with strict orders to keep it a secret. The First Lady's absence comes in the wake of the scandalous, public revelation of the president's affair, so at first it seems as

though she is simply cutting off all contact as she recuperates at a horse farm in Virginia. What begins as an innocent respite quickly reveals itself as a twisted case when the White House receives a ransom note along with the First Lady's finger.

This volume presents the refereed proceedings of the 7th International ICST Conference on Security and Privacy in Communication Networks, SecureComm 2011, held in London, UK, in September 2011. The 35 revised papers included in the volume were carefully reviewed and selected from numerous submissions. Topics covered include network intrusion detection; anonymity and privacy; wireless security; system security; DNS and routing security; and key management.
