A time-saving, stress-reducing approach to learning the essential concepts of pharmacology Great for USMLE review! "This could be a very useful tool for students who struggle with understanding the most basic concepts in pharmacology for course and licensure examinations. 3 Stars."--Doody's Review Service Basic Concepts in Pharmacology provides you with a complete framework for studying -- and understanding -- the fundamental principles of drug actions. With this unique learning system, you ' ll be able to identify must-know material, recognize your strengths and weaknesses, minimize memorization, streamline your study, and build your confidence. Basic Concepts in Pharmacology presents drugs by class, details exactly what you need to know about each class, and reinforces key concepts and definitions. With this innovative text you ' ll be able to: Recognize the concepts you truly must know before moving on to other material Understand the fundamental principles of drug actions Organize and condense the drug information you must remember Review key information, which is presented in boxes, illustrations, and tables Identify the most important drugs in each drug class Seven sections specifically designed to simplify the learning process and help you gain an understanding of the most important concepts: General Principles Drugs That Affect the Autonomic Nervous System Drugs That Affect the Cardiovascular System Drugs That Act on the Central Nervous System Chemotherapeutic Agents Drugs That Affect the Endocrine System Miscellaneous Drugs (Includes Toxicology and Poisoning)

The only pocket drug guide organized by classification! This practical resource provides succinct reviews of 36 drug classifications followed by descriptions of hundreds of generic drugs. Each classification provides a general overview of the actions, indications, adverse reactions/side effects, interactions, and other items relevant to each group of drugs. Individual descriptions follow and focus on normal dose ranges, special administration directions, and other drug-specific guidance. The reader-friendly layout makes finding essential information easy.

Rev. ed. of: Pharmacology clear & simple / Nina Beaman. c2008.

2 books in 1! Pharmacology Dosage calculations Save time and money with two books in one! Half pharmacology, half dosage calculations--plus an intensive, yet clear & simple review of

basic math! Here's the must-have knowledge and guidance you need to gain a solid understanding of pharmacology and the safe administration of medications in one text. A body systems approach to pharmacology with a basic math review and a focus on drug classifications prepare you for administering specific drugs in the clinical setting. See what students are saying online about the previous edition... "Very good setup and i passed with an A." "Bought as a text book for a class, I will be holding on to this as a desk reference." "Very easy to understand."

Novel Psychoactive Substances: Classification, Pharmacology and Toxicology provides readers with background on the classification, detection, supply and availability of novel psychoactive substances, otherwise known as "legal highs." This book also covers individual classes of novel psychoactive substances that have recently emerged onto the recreational drug scene and provides an overview of the pharmacology of the substance followed by a discussion of the acute and chronic harm or toxicity associated with the substance. Written by international experts in the field, this multi-authored book is a valuable reference for scientists, clinicians, academics, and regulatory and law enforcement professionals. Includes chapters written by international experts in the field. Provides a comprehensive look at the classification, detection, availability and supply of novel psychoactive substances, in addition to the pharmacology and toxicology associated with the substance. Offers a single source for all interested parties working in this area, including scientists, academics, clinicians, law enforcement and regulatory agencies. Provides a full treatment of novel psychoactive substances that have recently emerged onto the recreational drug scene including mephedrone and the synthetic cannabinoid receptors in 'spice' / 'K2'.

Quick Look Nursing: Pharmacology provides an overview of medications utilizing a systems approach. The drug information is simplified and organized into sections according to medications that affect a particular body system or a condition that interferes with a client's overall health. Each chapter contains a drug chart that lists prototype and related drugs for each classification; each drug is classified by its drug action, use, pregnancy category, adverse and side effects, interactions, contraindications, nursing implications, and client teaching.
